

Dental Crown Preparation.
Patient Information and Consent Form
Dr. Karla Macias-Diaz

I UNDERSTAND the treatment of dental conditions requiring CROWNS includes certain risks and possible unsuccessful results, with even the possibility of failure. I agree to assume those risks, possible unsuccessful results and/or failure associated with, but not limited to the following: Even though care and diligence is exercised in the treatment of conditions requiring crowns and fabrication of same, there are no promises or guarantees of anticipated results or the longevity of the treatment.

1. Reduction of tooth structure: In order to replace decayed or otherwise traumatized teeth it is necessary to modify the existing tooth or teeth so that crowns (caps) may be placed upon them. Tooth preparation will be done as conservatively as practical.

Local Anesthesia: I agree to the type of anesthesia, depending on the choice of the doctor. I understand the risk of the anesthesia, including but not limited to, allergy to the anesthetic and broken needle. I understand that pain, bruising and occasional temporary or sometimes permanent numbness in lips, cheeks, tongue or associated facial structures can occur with “Shots” (local anesthesia). About 90% of these cases resolve themselves in less than 8 weeks. Although very rarely needed, a referral to specialist for evaluation and possible treatment may be needed if the symptoms do not resolve. I consent my dentist to give me anesthesia anytime it is needed.

2. Sensitivity of teeth: Often, after the preparation of the teeth for the reception of either crowns or bridges, the teeth may exhibit sensitivity. It may be mild to severe. This sensitivity may last only for a short period of time or may last for much longer periods. If it persists, notify us immediately as this sensitivity may be from some other source. Teeth after being crowned may develop a condition known as pulpitis or pulpal degeneration. The tooth or teeth may have been traumatized from deep decay, extensive preparation, or other causes. It is often necessary to do root canal treatments in these teeth. If teeth remain too sensitive for long periods of time following crowning, root canal treatment may be necessary. Infrequently, the tooth may abscess or otherwise not heal which may require root canal treatment, root surgery, or possibly extraction.

3. Breakage: Crowns may possibly chip and break. Many factors could contribute to this situation such as chewing excessively hard materials, changes in biting forces, traumatic blows to the mouth, etc. Unobservable cracks may develop in crowns from these causes, but the crowns may not actually break until chewing soft foods or possibly for no apparent reason.

4. Uncomfortable or strange feeling: This may occur because of the differences between natural teeth and artificial replacements. Most patients usually become accustomed to this feeling in time. In limited situations, muscle soreness or tenderness of the jaw joints (TMJ) may persist for indeterminable periods of time following placement of the prosthesis.

5. Esthetics or appearance: Patients will be given the opportunity to observe the appearance of crowns in place prior to final cementation.

6. Longevity of crowns: There are many variables that determine “how long” crowns can be expected to last. Among these are some of the factors mentioned in proceeding paragraphs. Additionally, general health, good oral hygiene, regular dental checkups, diet etc., can affect longevity. Because of this, no guarantees can be made or assumed to be made.

7. It is the patient's responsibility to seek attention from the dentist should any undue or unexpected problems occur. The patient must diligently follow any and all instructions, including the scheduling and attending all appointments. Failure to keep the cementation appointment can result in ultimate failure of the crown to fit properly and an additional fee may be assessed.

INFORMED CONSENT: I have been given the opportunity to ask any questions regarding the nature and purpose of crown treatment and have received answers to my satisfaction. I voluntarily assume any and all possible risks including those as listed above and including risk of substantial harm, if any, which may be associated with any phase of this treatment in hopes of obtaining the desired results, which may or may not be achieved. No guarantees or or promises have been made to me concerning the results.

The fee(s) for service have been explained to me and are satisfactory. By signing this document, I am freely giving my consent to allow and authorize Dr. Macias and/or her associates to render any treatment necessary and/or advisable to my dental conditions including the prescribing and administering any medication.

Signature of Patient or legal guardian If the patient is unable to sign or is a minor.
